

**Abstract:**

A photocurable dental coating material comprises

- (A) 40 - 60% by mass of a matrix resin:
- 5 (B) 60 - 40% by mass of a filler mixture
- (C) 0.1 - 1% by mass of one or more polymerization initiator(s)
- (D) trace quantities of one or more dental pigments.

The material is useful in a method of adjusting the color of dental restorative parts by applying the coating material to the surface of the part, e.g. by brush, and curing the layer.
